IMPLEMENT CODE TO RECOGNIZE TOKENS IN C

AIM:

To implement the program to identify C keywords, identifiers, operators, end statements like [], {} using C tool.

ALGORITHM:

- 1. Start
- 2. Define functions to check if a character is a delimiter, operator, or a valid identifier.
- 3. Define functions to check if a given string is a keyword, integer, real number, or a valid identifier based on certain conditions.
- 4. Define a function to extract substrings from the input string based on delimiter positions.
- 5. Define a parsing function that iterates through the input string character by character and identify substrings delimited by spaces or operators.
- 6. Check each substring for being a keyword, integer, real number, or a valid identifier and print the corresponding message.
- 7. Define the main function.
- 8. Initialize a string with the input expression.
- 9. Call the parsing function with the input string.
- 10. Print the results of the parsing, indicating whether substrings are keywords, integers, real numbers, or valid identifiers.

PROGRAM:

Roll Number: 210701125

Name: Koushik H

        printf("The expression is: float b = 0.5 * b; n");
        char str[100] = "float b = 0.5 * b; ";
parse(str); // calling the parse function
return (0);
}
OUTPUT:
```

Roll Number: 210701125

Name: Koushik H

```
(kali@ kali)-[~/Documents/cdlab]
$ vi exp1.c

(kali@ kali)-[~/Documents/cdlab]
$ gcc exp1.c

(kali@ kali)-[~/Documents/cdlab]
$ ../a.out
The expression is: float b= 0.5 * b;'float' IS A KEYWORD
'b' IS A VALID IDENTIFIER
'=' IS AN OPERATOR
'0.5' IS A REAL NUMBER
'*' IS AN OPERATOR
'b' IS A VALID IDENTIFIER
```

RESULT:

Thus, a C program is implemented to identify C keywords, identifiers, operators and end statements.
